

Astreya: Stuff Station Break/Fix Support

Tier 1 Service

Safety Guidelines	▼
-------------------	---

Context

The stuff station ecosystem includes the vending solution, secure lockers and Grab n Go loaners. The Grab n Go laptop system is commonly referred to as GnG.

Purpose

The purpose of this process is to outline the EMT responsibilities in supporting Stuff Stations through tickets for all components of Stuff Station. The successful execution of this process ensures tickets are handled consistently and with the appropriate sense of urgency and documented thoroughly.

Scope

Technicians in locations with Stuff Station hardware can use this document to understand the expected troubleshooting and engagement process for SME support for all break/fix tickets related to the Stuff Station. Break/Fix is a broad description of issues that could include configuration items, planogram updates or any type of SME level support

This article does not cover accessory replenishment, or Grab n Go maintenance procedures.

To make the best use of this playbook, you should be familiar with:

- Stuff Station Overview Documents
- Stuff Station Hardware
- Vision Software

Process

Alert tickets (alert ticket example: [\(t/229073412\)](#) [🔗](#) created by the Stuff Station include troubleshooting instructions in the description section. These instructions also contain a note stating that if further instruction is needed to direct your ticket to the signifi-stuffstation guts group.

EMT troubleshooting is limited to the following actions

- Ensuring the unit's power cables are properly seated into the wall socket
- Power cycling the unit to remove error codes and restore system functionality
- Leveling the feet to ensure the machine is square, which allows the doors to open unobstructed
- Investigating miss-vends and elevator jams
- Inspecting individual charging cables for proper seating (power source and GnG asset) and any abnormalities preventing charging
- Inspecting power adapters to confirm they are properly seated and there are no abnormalities (exposed wires, visible wire shielding, etc.)
- Testing doors to ensure opening and closing, proper alignment, and latching and locking
- Resetting stock levels
- Ensuring physical stock matches virtual stock data
- Ensuring the virtual planogram is accurately reflected in the physical vending machine
- Resolving enrollment issues with Grab and Go laptops

💡 In the event that EMT is asked to provide entry and escort to a Signifi dispatched tech, please provide [go/tech-escort](#) to the requester and only provide this service when requested through a ticket.

BAU Support Process

1. Alert ticket is generated from a Stuff Station with troubleshooting steps included.
 - a. Tickets will contain some variation of **Hands and Eyes** in the summary line.
 - b. Potential CTIs:
 - i. emt > stuff gng > hardware maintenance
 - ii. emt > stuff gng > hardware troubleshooting
 - iii. emt > stuff locker > hardware maintenance
 - iv. emt > stuff locker > hardware troubleshooting
 - v. emt > stuff vending > hardware maintenance
 - vi. emt > stuff vending > hardware troubleshooting
2. Document each action performed and the result.
3. If the issue is resolved,
 - a. Document all troubleshooting steps taken and the outcome of each
 - i. Copy the troubleshooting from the ticket description
 - ii. Update the results of each troubleshooting step in line
 - b. In the **Duration (Hours)** field under the **Corp Eng support section** of the GUTS ticket.

 This field is mandatory, and despite the heading, should be recorded in minutes. Refer to the table below for easy conversion.
4. If the issue is **not** resolved, record all actions taken and request further action from the Signifi team.
 - a. Assign the original ticket to the signifi-stuffstation guts queue.
 - b. Do no further work on this ticket.
5. Signifi will remotely troubleshoot and attempt to resolve the issue,
 - a. if hands and eyes support is needed from Astreya, a child ticket will be created through [go/handsandeyes](#) by Signifi and assigned to the EMT-A queue in the correct location.
 - b. If the issue is not resolved after completing the troubleshooting provided by Signifi, add a worklog update detailing that actions you have taken, and the outcome of each action. Include a statement indicating the issue is not yet resolved, but the ticket will be resolved. Signifi will open a new request if they identify additional troubleshooting to be attempted.
 - c. This ticket will specify the actions that need to be taken
 - d. If the steps outlined in the child ticket resolve the issue, record your actions and resolve the ticket.
 - i. Copy the troubleshooting from the ticket description
 - ii. Update the results of each troubleshooting step in line
 - iii. In the **Duration (Hours)** field under the **Corp Eng support section** of the GUTS ticket.

💡 **The original ticket cannot be used to request additional work.** The system generated ticket will remain with Signifi until the issue is resolved.

The use of a support chat between Astreya and Signifi techs must always reference the related ticket number before any work is undertaken. Please reference ticket numbers in all communications between Astreya and Signifi, and record any instruction provided in the ticket.

For example, chats should start with a ticket # and then proceed with a question or instruction.

t/2241xxxxxx We are receiving multiple alerts for AU-SYD-PIR-5-VD1 and require assistance?

This creates an audit trail and visibility to how work is being transacted between teams. This also allows us to trend issues and resolutions on a broad scale.

After 15 min of troubleshooting, EMTs need to work with a supervisor or manager to determine if a Level 2 tech is required, or if more time is required by Level 1 to resolve the issue. All time must be accounted for in the duration field and it is cumulative. (For example, if you performed troubleshooting for 15 minutes but did not resolve the issue, note the time. The next tech will add their time to that total). See the time conversion chart:

Time conversion table		
Minutes	Hours and Minutes	Record Time
10	0 hours 10 minutes	10
15	0 hours 15 minutes	15
30	0 hours 30 minutes	30
45	0 hours 45 minutes	45
60	1 hours 0 minutes	60
75	1 hours 15 minutes	75
90	1 hours 30 minutes	90
105	1 hours 45 minutes	105
120	2 hours 0 minutes	120
135	2 hours 15 minutes	135
150	2 hours 30 minutes	150
165	2 hours 45 minutes	165
180	3 hours 0 minutes	180

Working

Signifi on 04/20/2025 20:39

Hi Fabio,

Thank you for your patience.

Please refer to the below information for the hand and eyes support details:

-Located the reported cabinet and manually tested the door using the keys

-The lockers opened as expected

-Badged in and attempted to open the door multiple times via the UI controls

-The door opened as expected either

-tested for other random doors

-The door opened as expected

-Confirmed 1VA-VTIC-TPHD-10-1010A is functional now.

Total time spent: 28 mins

Your request has been completed, we will now resolve this ticket.

Best Regards,

Jessica

Signifi on 04/20/2025 20:13

Hi Fabio,

Thank you for requesting GNS Hands and eyes support.

We are currently processing this request for you.

Please expect an update by 8:21.

Best Regards,

Jessica

Qualities to Observe

- A duration shown as the number of minutes spent working the ticket (circled)
- A clear statement of the steps taken (top arrow)
- An outcome of each step taken (middle arrow)
- A resolution statement (bottom arrow)

Workflow

Planogram Support Issues

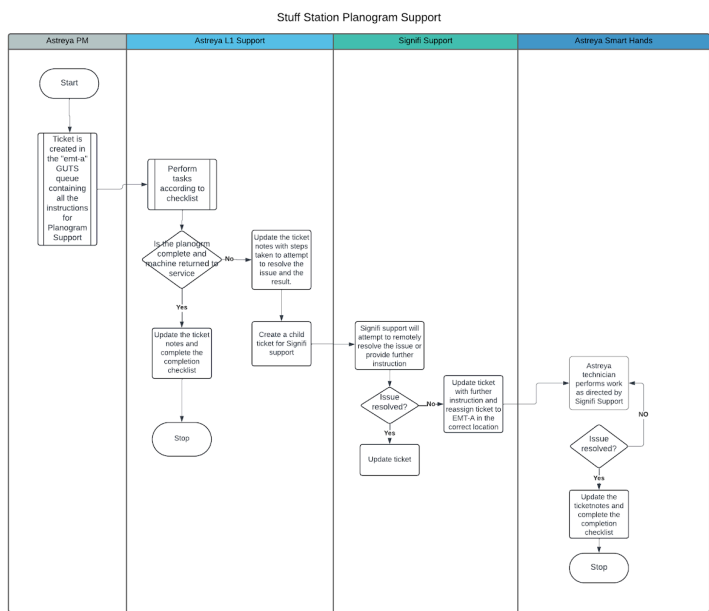

A master ticket is created for each Stuff Station to initiate a planogram update.

The checklist of activities is included in each ticket. If Signifi assistance is required during the execution of tasks related to the Planogram update, we need a ticket created to engage their help.

Please create a child ticket to describe what help is needed from Signifi and detail where you are in the process, what issue you have run into and a specific request for help.

Signifi will utilize the same child ticket to direct any support needed until the planogram update is complete.

Any activity that is directed through the support chat must follow the same protocol described above with each entry beginning with a ticket number, and a request or direction.

Self Check

- Ensure that all troubleshooting is accurately reflected in the worklog
- Ensure that each related ticket is cross references so that a clean audit trail exists.
- Do not perform work that does not have a ticket specifically for the work being requested.
