About

ACO Reach is a web-based application designed to enable *Longevity Health Plan*™ coders to accurately code the patient visits and to submit claims.

This system encompasses various functionalities that includes beneficiary eligibility check, visit coding and auditing, claim generation, claim submission, and revenue cycle management. It also assists in several visit-type configurations to ensure a comprehensive care delivery and billing accuracy.

The **ACO Reach** provides an integrated service that add members and provide relevant functionality in different product types. This application fulfils the needs for Member Registration, Management, Risk Indication, Scheduling and Appointment, Patient Care and many more.

The **ACO Reach** can experience integrated environment for third party APIs that pull data relevant to healthcare, insurance claims and codes for medical services and procedures.

Change Log

v1.00.000

Title	ACO Reach Version V1.00.000 (Powered by OpenEMR v7.0.2)
Type	Intermediate / Major
Release Date	31-Aug-2024
Features	• Clinical Workflow 1. Import Patient Data 2. Assign – PCP, Medical Group, Facility, Provider and Risk Information to Patient profile. 3. Configure Visits - Required/Optional Forms 4. Scheduling Appointments 5. Add Issues to the Patient profile, IMO Integration 6. Insurance Validation 7. eSign, Download, Edit Visit Forms • Coding & Billing 1. Fee Sheet 2. Pricing 3. X12 (ClaimRev) EDI based exchange for Clearance 4. Revenue Cycle – Claims, Provider, Reconciliation APIs. 5. Auto Generate Claims 6. Split X12 file. • Dashboard – Appointments, Risk Cards, Newly Added Patients, Encounter Type, Form type, Missing Data

v1.00.00x

Title	ACO Reach Version V1.X

Overview

This initial release of **ACO Reach** is deployed with [Clinical Workflow](#), [Coding & Billing](#) and [Dashboard](#) features to ensure the most vital functionalities of the healthcare are met.

Clinical Workflow

Clinical workflow involves a series of tasks performed by various people who delivers care. The **ACO Reach** will give you the below Clinical Workflow functionalities.

Member Management

- **Add members from a data file or create with manual Demographic Data**
Clinicians can add members manually by entering data or by importing data from external file.
- **Assign – Facility, Medical Group, PCP, Provider for the member**
Clinicians can assign the specific facility, Medical Group, Primary Care Physician (PCP) and Healthcare provider group to the member.
- **Risk Level Assignment**
This feature helps the clinician to assign the risk level of the member.
- **Appointment Scheduling**
The inbuilt Calendar functionality eases the clinician's task of scheduling appointments.

Insurance Eligibility Check

Clinicians are allowed to check the real-time eligibility verification and insurance validation with this integrated quick-check feature.

Form Engine

Clinicians can now to create their own forms for patient assessments without any intervention from developers using Form Engine service.

These forms can be assigned for member encounters as Required or Optional forms for the visit type.

This service also assists the clinicians to pull and push the form data into below medical records:

- Issues
- Medical Problems
- Allergies
- Medications
- Immunizations
- Vitals and Labs.

Visit Type Configuration

Clinician can create the encounter based on the visit type from the below options. Each visit type is associated with specific clinical information that is required to be captured in assessment of patient health.

- ☒ Initial
 - ☒ Acute
 - ☒ Follow-up
 - ☒ Post Hospital
 - ☒ Annual Wellness
 - ☒ Chronic Condition Management
 - ☒ Preventive Health
 - ☒ Hospice/Palliative
 - ☒ Visit Addendum
-

Visit Type Workflow

- **Required/Optional Forms**

Clinicians has a provision to allocate required/optional forms (for a specific Encounter type).

- **Encounter eSign**

After a successful completion of an encounter, clinicians can eSign the encounter to validate and save the data. In case of any discrepancies found in the data after eSign, an amendment can be made to remove eSign and edit the data in the encounter. The Encounter eSign comes with a lock feature to finalize the form and avoid further editing.

- **Generate PDF**

Clinicians can generate the PDF document of the encounter after eSign.

Intelligent Medical Object (IMO) Integration

Clinicians can use the integrated IMO feature, which is a clinical data intelligence programme for extensive search of medical issues using the in-built AI to generate sharper insights.

Coding & Billing

Billing

- **Fee Sheet**
Clinicians can now calculate the fee structure much efficiently for the service with additional code support such as CPT4, HCPCS, ICD10, etc.
- **Code pricing**
The ease to set price for each clinical code has been made easy to clinicians.
- **X12 Claim Rev (Clearing House Partner) exchange**
The administration staff can use the EDI format of exchanging healthcare data for insurance claims clearing purposes.
- **Claims API (Reporting Reconciliation)**
Clinicians can pull the real-time data of insurance claims.
- **Autogenerate Claim (837)**

Dashboard

Clinical Dashboard

The current functionality of the **ACO Reach** Dashboard provides the data of assigned members through below boards:

- **Patient Risk Cards**

The dashboard contains colored cards (**Low Risk**, **Medium Risk**, **High Risk**) which give a better picture to the clinicians on the count of patients based on risk level.

- **Members Missing Required Date**

Clinicians will be shown with a list of newly created patients with highlighted missing information on the dashboard.

- **My Appointments**

Clinicians are provided with a glance of Past/Upcoming appointments of patients.

- **Annual Visits**

A list is presented to the clinicians on the dashboard that shows Upcoming/Past scheduled annual visits of members.

- **New Patients Data**

The dashboard also highlights the clinicians with the data of newly added patients in the past 5 days.

- **No. of Patients by Encounter/Form Type**

Clinicians can see a list of patients currently under the work type of a specific visit/encounter or form.
